

SUMMARY

Full stack software engineer with 4+ years in cross functional, compliance heavy environments, turning ambiguous regulatory requirements into efficient, reliable, and developer friendly systems.

SKILLS

Languages Javascript, Hack(PHP), Erlang, SQL, Python, Go, C#, Java, C

Technologies ReactJS, GraphQL, Vue.js, WPF, Git, Mercurial

EXPERIENCE

- **Meta (WhatsApp)** London, UK
IC4 Software Engineer Feb. 2024 - Current
 - Led design and rollout of an offline code-analysis platform to inventory operational loggers across the codebase, creating a reliable source of truth for compliance and observability.
 - Enabled static and dynamic analysis pipelines and CI integration that tracks privacy assignment of loggers, fulfilling EU regulatory commitments while preserving developer velocity.
 - Introduced ownership attribution for operational logging, enabling targeted task delegation and reducing load on critical infra oncall rotations.
 - Owned and evolved an internal data-access tool, aligning engineering and approval stakeholders on streamlined workflows and onboarding multiple engineers to operate and extend it.
 - Onboarded legacy metric identifiers into automated deletion systems, eliminating redundant storage and saving \$40k+ per year while simplifying data-retention compliance.
 - Implemented dozens of updates to production services to improve tracking of data flows within and between systems, working with service owners to roll out changes safely.
 - Optimised critical compliance pipelines (time, space, and DB connection usage), improving reliability and lowering operational costs for regulatory reporting.
- **IC3 Software Engineer** May. 2022 - Feb. 2024
 - Scoped and delivered a tool to track data access requiring legal approval, partnering with legal and engineering stakeholders to automate work that previously consumed an entire team.
 - Reduced time to access by over 90% by designing automated notifications and parallelising stakeholder approvals.
 - Structured previously freeform access records into auditable, schematised data, enabling faster internal audits and simplifying regulatory reporting.
 - Initiated and organised team and office-wide social events (swag, dinners, activities), strengthening cohesion and supporting onboarding of new colleagues.
- **Optiver** Amsterdam, NL
Software Engineer Intern Jul. 2021 - Aug. 2021
 - Owned requirements gathering, design, and implementation of a C# WPF GUI to navigate 2M+ data feeds.
- **University of Bristol** Bristol, UK
Teaching Assistant Oct. 2020 - May. 2021
 - Taught Imperative Programming (C), Mathematics for Computer Science A, and Algorithms I.
- **Commerzbank AG** London, UK
Software Engineering Intern Jun. 2020 - Sep. 2020
 - Owned and developed a CRUD frontend and a full-stack log monitor (React, Go, WebSockets) for live metrics.
- **Oxford Economics** Oxford, UK
Software Development Intern Jul. 2018 - Aug. 2018
 - Developed C# chatbot for requesting and viewing economic reports in chat.

EDUCATION

- **University of Bristol** Bristol, UK
BSc (Hons) Computer Science 2:1 2019 - 2022
 - President of the University of Bristol Computer Science Society: 20+ events with up to 100+ attendees.
